

How to Navigate Your Career in a Male-Dominated Field

2016 Seminar Series

Alumni Seminar, Emily Dunkelberger

April 20th, 2016 at 9:30 am, Room 9341

Food and Refreshments at 9:00 am

Deciding what to do after chemistry graduate school can be difficult, especially if the only thing you're certain of is that you don't want to follow the traditional route of becoming a professor. Dr. Emily Dunkelberger received her Ph.D. in chemistry from the University of Wisconsin-Madison and is currently a research chemist at the National Institutes of Health. She will discuss her experience transitioning from working as a graduate student to working at a national lab: how she decided on this career trajectory, how she found and got the job, what it is like to work at a national lab, and her experiences of being a female chemist in a male-dominated work environment.

Next Seminar: Successful Women Leaders Within the Community
