

Chemistry Imagined: Correlations

An exhibition of **Vivian Torrence's** collages, from her "Chemistry Imagined" project with chemist **Roald Hoffmann**.

August 16-October 1, 2013

Opening Reception August 16th 6-8pm, open to all

Location: Gallery 1308 at Union South, University of Wisconsin, 1308 W. Dayton Street, Madison WI

This exhibition brings to Madison the outcome of a remarkable art-science collaboration. When artist Vivian Torrence and chemist Roald Hoffmann met, crafting a connection of art and science seemed natural. Images of alchemy and science already were in Torrence's collages. And Hoffmann is a poet. A collaboration arose, to create a set of paired collages and associated short texts trying to penetrate to the soul of chemistry, a science fundamentally about change. Torrence's enticingly mysterious and clear collages are accompanied by excerpts from Hoffmann's texts. This exhibition is presented in collaboration with the Wisconsin Science Festival (September 26-29, 2013).
